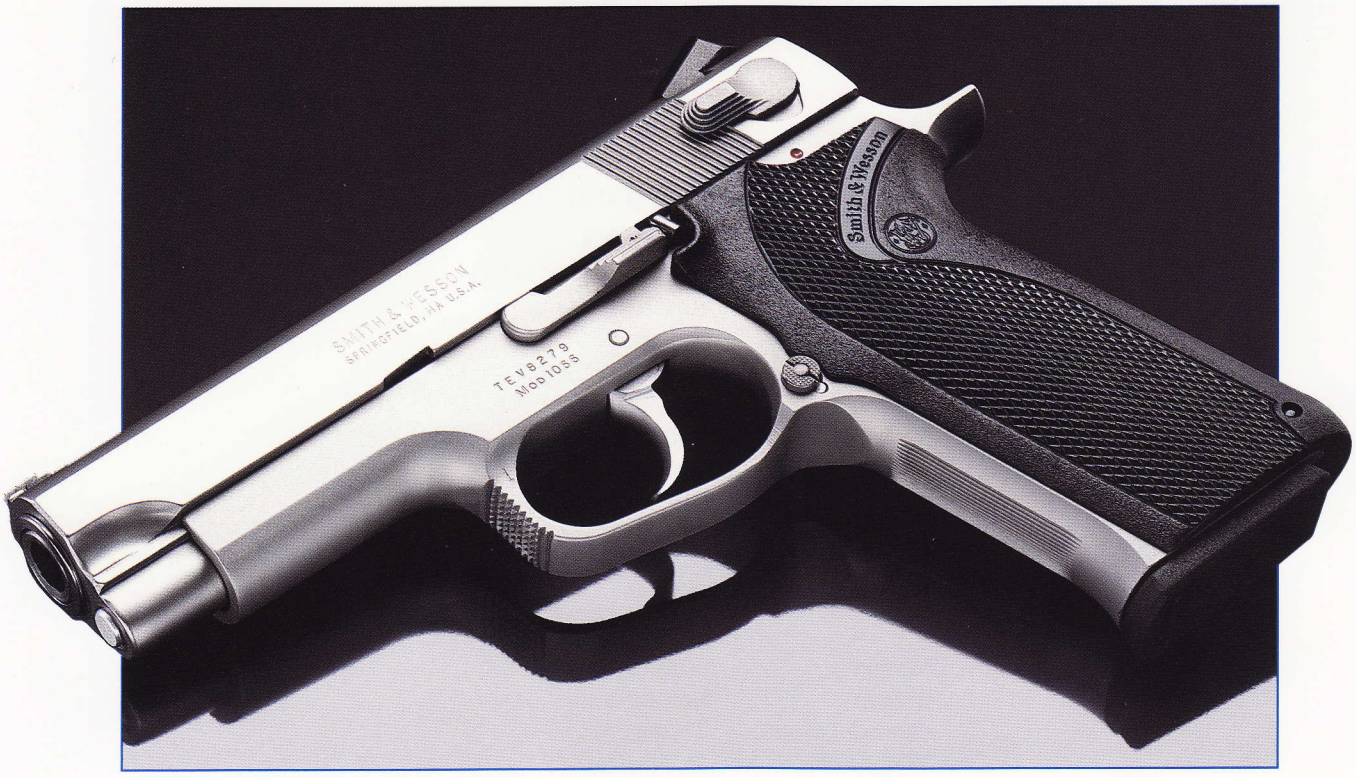
New Product Introduction



Compact, Smooth Profile, Night Sights

THE SPECIAL S&W 10MM MODEL 1066-NS(Night Sight)

Here's the newest addition to the already popular Smith & Wesson 10mm pistol line - the compact Model 1066 with night sights.

Like the full-size Model 1006, the Model 1066 features a non-reflective stainless steel finish, traditional double action first shot operation, and curved wraparound Xenoy® grips.

Unlike the Model 1006, this model features a barrel length that is a full three quarters of an inch shorter, a .260 bobbed hammer to enhance its smooth snag-resistant profile, and fixed Novak Lo-Mount Carry sight with tritium (night sight) inserts-- for quick sight alignment under lower light conditions.

The new Model 1066-NS will be available in a **limited quantity** of one thousand units and is available now from your Smith & Wesson Distributor.
